

RBTi is a trusted information security integrator that has the knowledge and relationships to help an organization form best practices in regards to defense, event management, remediation, work flow, and compliance regulations to achieve their desired information security program by integrating these best practices with the right people, policies, procedures, and technologies.

Information Security Services Model

RBTi's services model is one that customers can use to address a specific project area or multiple areas of security needs by integrating different security services into one project while still maintaining simplified security management and best practices. RBTi offers customers planning, evaluation, selection, and deployment of security solutions customized to its customer's needs. RBTi helps organizations protect their digital assets against internal and external threats while enabling them to achieve their connectivity and security objectives through the selection and implementation of effective security tools and solutions.

Security Manager—Job # 18.102

According to Gartner Group and the State of Florida, job responsibilities include:

- **Manages the development of IT security standards and best practices across the enterprise**
- **Implements processes and methodologies for for auditing for non-compliance**
- **Facilitates migration of non-compliance systems and networks to compliant network**
- **Manages and participates in planning and implementation of security administration for ALL IT projects**
- **Evaluation and selection of security products**
- **Ensures highest level of security for customers with clients accessing databases and applications**

In order for any organization to successfully leverage the skills of a seasoned data security specialist and accomplish any or all these tasks successfully, information security solutions and best practices should be designed with the clients business goals in mind. RBTi has years of experience with state and local agencies offering security services and designing solutions that meet their specifications; easy to use, integrates with other projects, provide cost savings, and provides desired security levels.

Service Solutions:

RBTi uses state of the art, real time, information security and discovery tools to provide a client with a glass bottom boat view of their network and provide valuable information and benchmarks to plan a security strategy or policy compliance program. RBTi believes this step in the security management lifecycle to be critical in developing IT standards and best practices across the enterprise and for the Security Manager's role to be successful. RBTi has been assisting government entities for years with the planning and deployment of IT solutions with security being integrated into the projects from the beginning to assure success.
